

Connecting to ResNet

The following instructions are for Ubuntu 6.10 (Edgy Eft) users. If your computer uses any other operating system, please contact the UNO Help Desk at 280-HELP (4357) for assistance.

This document assumes you are familiar with Linux and using a bash terminal. If you need assistance, please call the UNO Help Desk. Any text in `this format` is meant to be entered into your bash terminal.

1. First, make sure your install is up to date. Run the following command in a terminal.

```
sudo apt-get update
sudo apt-get upgrade
```

2. You will need to install the following packages

```
sudo apt-get install wpagui
sudo apt-get install dhcpcd
```

3. Now you will need to create your `wpa_supplicant.conf` file.

```
sudo gedit /etc/wpa_supplicant.conf
```

Cut and paste the following.

```
ctrl_interface=/var/run/wpa_supplicant
ctrl_interface_group=root
ap_scan=0
network={
key_mgmt=IEEE8021X
eap=PEAP
identity="UNO Domain Username"
password="UNO Domain Password"
phase1="peaplabel=0"
phase2="auth=MSCHAPV2"
}
```

You will need to replace “UNO Domain Username” and “UNO Domain Password” with your username/password. Be sure to include the “ ” marks.

For example,

```
identity="jsmith"
password="password"
```

4. Save and close this configuration file and return to the terminal. Now you will create a script to start wpa_supplicant and authenticate.

```
sudo gedit 8021xwired.sh
```

Cut and paste the following:

```
#!/bin/bash
ifconfig eth0 up
ifconfig eth0 promisc
wpa_supplicant -i eth0 -d -Dwired -c /etc/wpa_supplicant.conf&
sleep 1
wpa_gui&
dhcpcd -do eth0
```

5. Save and close the script. You will need to make it executable:

```
sudo chmod 777 8021wired.sh
```

6. In order to authenticate to ResNet, you will need to execute the script:

```
sudo ./8021wire.sh
```

This will open the wpa gui. It should list your ethernet adapter as well as an IP address: 137.30.xxx.xxx. If this appears, you have authenticated and you can close the gui.

The script will finish once dhcpcd returns.

After you disconnect from the network (either by turning your computer off or unplugging your network cable) you will need to run this script again to authenticate.

If you need assistance with this process, or have any other trouble connecting to ResNet, please contact the UNO Help Desk at 280-HELP (4357).

.: ResNet Copyright Infringement Policy .:

In accordance with federal legislation, specifically the Digital Millennium Copyright Act of 1998, ResNet Internet Service will undertake very specific action when formal notifications of copyright infringement by ResNet users have been received from copyright holders or their representatives. The ResNet Support Group will certify that positive contact with the user has taken place and that the user has either ceased the infringing activity or that ResNet Support has taken action on its own with the result of ceasing the infringing activity when the activity originates from within the ResNet network.

In response to this legislation, the ResNet Support Group has developed the following procedures. Compliance with applicable law is the ultimate goal. Much of the activity occurring in violation of copyright laws is the result of peer-to-peer file sharing software usage by users who are, as often as not, unaware that certain uses of this software violates copyright laws. Consequently, user education is a necessary component of required compliance efforts. ResNet staff will maintain sufficiently detailed records reflecting infringement notices received and responses thereto. The following are the procedural steps to be taken in response to formal notifications of copyright infringement:

1. University Computing & Communications receives notice that a user may be violating copyright laws.
2. Upon determination that the user is connected to ResNet based on the IP address given in the complaint, the complaint is routed to the ResNet Support Group.
3. ResNet staff will search records and determine the identity of the user.
4. ResNet staff will search records to determine whether the user is a repeat offender. If it is clear that the user is a repeat offender, the complaint will be handled as described under "Repeat Offenders" below. If this complaint is a first offense, the "First Offense" procedure will be followed.

First Offense

1. ResNet Support will immediately suspend network service.
2. ResNet Support issues an e-mail notice to the user explaining the reason for suspension. The infringement notice will be included as an enclosure to the e-mail notice.
3. ResNet Support will reactivate service after contacting the ResNet user.

Repeat Offenders

1. ResNet Support will immediately terminate network service.
2. ResNet Support will send an e-mail notice to the user explaining that a second or subsequent complaint of infringing activity has been received and that the user's network service has been terminated.
3. ResNet Support will notify the University Office of Judicial & Student Assistance that a second offence has occurred and will forward all pertinent information for review.

Failure to adhere to UNO Acceptable Use Policies may result in loss of privileges as well as disciplinary or legal action.
